

Webinar Series 2

FARMING IN A LOW CARBON ECONOMY

Insights

About the webinars

Following on from the interest in 2022, this webinar series aims to continue to give farmers and other interested stakeholders in eastern Gippsland different insights and perspectives into opportunities (and challenges) of operating in a low carbon economy. It will also provide quick updates on a range of different initiatives that might be of interest for participants to tap into. We're also keen to hear about what you'd like to learn more about.

Why participate?

We collectively recognise that this is a dynamic and often uncertain and confusing space, and how important it is to learn together.
